Learn About Treating
Canine Osteoarthritis
Effectively

Elanco Animal Health is excited to share with you a new online CE webinar:

When and How? Treating Canine Osteoarthritis Effectively – presented by Dr. Duncan X. Lascelles.

According to Dr. Lascelles, osteoarthritis is much more common than we have previously realized – perhaps up to 35% of all dogs. As a profession, we do not diagnose OA in patients until the clinical signs lead to disabilities that the pet owner can recognize – disabilities that result in an inability to perform the activities of daily living. At that point, these patients are difficult to treat.

In this webinar, Dr. Lascelles will be discussing how to identify these dogs earlier and treat them proactively to delay disability and prolong mobility and quality of life. Click below to view a personal invite message from Dr. Lascelles.
